

AGORA

Accelerate productivity with the top-notch content services platform - secure content management, multitool integrations and business process automation

Accelerate productivity with the top-notch content services platform - secure content management, multitool integrations and business process automation

Automate Business Processes with AGORA

Today, your organization needs to focus not so much on the storage of content across the system but on the active interactions your customers and employees have with it. The primary goal is to deviate from paper-based work, increasing productivity and enabling you to boost efficiency within your business and beyond.

AGORA brings together all the above-mentioned demands, providing a fully-featured set of solutions and tools to support digital business and secure content management.

Solutions by department

Enterprise Content Management

This solution is a set of key services and solutions for storing, managing and controlling information with the appropriate context for taking meaningful action. It contains document and records management, automation tasks, integration, and more.

Document and Records Management

Comprehensive document and records management tools allow you to properly centralize and protect files, while providing the convenience of collaborative workgroups and quick retrieval of what you need.

Contract management

Automation and monitoring of work with contracts allows you to optimize their entire life cycle from internal contract requests to final signing and archiving.

Human Resources

The human resources solution automates all aspects of the hiring and onboarding process. It provides access to all employee information from a single application.

Case Management

The Case Management solution organizes and coordinates a network of formal and informal activities, services and support aimed at optimizing the well-being of the individuals and families served.

Asset Management

The solution which allows to have a single database of tangible and intangible assets of enterprises (licenses, hardware/software registries, etc.). It is aimed at improving the efficiency of separate departments or the business as a whole.

• Register of permit documentation

The solution provides automation of the full cycle of issuing permits from receiving applications for issuance to registering the issuance of such documents. Allows you to interact with public portals for interaction with Applicants;

• Register of test results

The solution provides automation of collection, storage and processing of observation, measurement and testing data with the possibility of data logging both automatically and manually;

• e-Library

The solution aims at the formation of a single information space for employees of organizations or members of working groups with an easily customizable catalog, the ability to upload various files (MS Office, media, cartographic maps and layers, etc.) and connect materials from external resources;

• Project task management

Non-determined process of project or task management which involves collaboration of different groups of people or user roles inside the organization.

Solutions by industry

State and Local Government (Public Sector)

AGORA provides the management of state public portals that publish the necessary information and materials for citizens and communicate with them to address daily and social issues. Moreover, it is worth noting that the platform provides the necessary security requirements for the management of public registers by employees of all levels of government.

Natural Hazards Monitoring

The Natural Hazards Monitoring solution is a single platform for disaster risk management, providing collaboration to all participants of this process as well as early warning and public awareness.

Healthcare (Drug and Vaccine Logistic Management)

The vaccine and drug logistics management solution is based on RIM HL7 and automates planning, distribution, and compliance with all procurement and warehousing management procedures.

AGORA Benefits

Among the main advantages of using AGORA for the business we can highlight the following:

- Speed-up development comparing for creating system "from scratch";
- Lower price (and cost of ownership) comparing to implementation of "out-of-the-box" brand solutions;
- Extended Security by private CMS;
- CMS on Java Script (full-stack) which brings us the possibility to handle as well as solve a majority of the tasks. The coding language is powered by its inimitable nature, the libraries it has, and the popular frameworks;
- Possibility of implementing and administration the public (web portal) and service part (data platform) of the solution as one application;
- Single CMS for multiple websites with a role model of administration.
